Butterfly myringoplasty

- Less invasive
- Favours otoendosurgery
- No flap raised
- Tiny skin incision
CW

- 35 F
- Intermittent discharge
- Smelly ear when infected
- Regular swimmer
After 6 weeks

**CW**

- 35 M
- Persistent discharge
- Smelly ear
- No useable hearing
After - 3 weeks

After - 6 weeks
MP

- 45 F
- Persistent discharge
- Smelly ear
- Needs hearing aid on diseased side
- Poor contralateral hearing
Conclusions

• New technique of access to the middle ear
• New technique of grafting the TM
• Far less tissue trauma
• Day surgery more likely
• Patient-friendly
